

## Frontend web development with modern web technologies

My name is Michael Pumo. I'm a freelance frontend web developer based in London, UK and I'd like to help you build your next project.

## People I've recently worked with

For a full list of agencies and further details of my work history please refer to my profile on LinkedIn.

### **Bond and Coyne**

May 2020 – Jul 2020

Build of a microsite to showcase the Earth's 'health' with Pure Choice Partnership. Hosted on Netlify and powered by a headless Prismic CMS this Vue.js app interacts with an API to monitor the health of the Earth depending on social media activity. It also features a WebGL globe of the Earth that users can interact with to view social media posts by geo location.

### **Dark Blue**

May 2020

A small Nuxt.js website built using WordPress as a headless CMS to showcase the offerings from a new London based Yoga and well-being studio. It also features a custom web form that captures user data into their Kizen CRM.

### **AllofUs**

Nov 2019 – Jan 2020

Extensive frontend build for a Magento powered eCommerce site for G. F Smith. I lead a small development team of 3 to produce frontend components within a design system that utilises Storybook and Vue.js. All facets of our work were required to be deeply documented for the purpose of handover to an offshore backend development team.

### **Matter Of Form**

Sep 2019 – Oct 2019

Build of a Vue.js powered website (unfortunately under NDA) for a major player in the luxury travel industry. Working and mentoring with junior developers within a team of 5.

### **MultiAdaptor**

Jul 2019 – Aug 2019

Working with MultiAdaptor to explore and prototype ideas for their new agency website; desinging 'in-browser'.

### **SomeOne**

Jun 2019 – Jul 2019

Various projects built with Nuxt.js and Prismic CMS, deployed and hosted on Vercel.

**Want to know more? Check out my portfolio or LinkedIn profile.**

## About

I'm a friendly and focused frontend developer, originally from a design background. I'm always eager to learn new things in this fast-paced industry, with the aim to improve productivity, speed and quality.

I've been contracting/freelancing for nearly 8 years and I can take full ownership of a project from start to finish or work along side an existing team.

Working with well structured designs, I'm able to transform flat visuals into accessible, semantic and interactive web applications that are pixel-perfect and device responsive.

Most of my experience sits within a frontend perspective using a JavaScript framework such as Vue.js in order to build out fully besoke websites.

I'm always happy to explore new tools, paradigms and ideas on the job and to share knowledge amongst a team.

You can often find me tinckering on my own side projects with dreams of making the next big thing!

More often though, this is just an excuse to explore new avenues and approaches that I can apply to real-world problems, hopefully having some fun along the way.

## Selected projects

I'm often in the process of projects that aren't quite ready yet so please feel free to ask me about those in person.
